Charles F. "Chuck" Sams III

Charles F. "Chuck" Sams III is 19th director of the National Park Service. Sams is Cayuse and Walla Walla and is an enrolled member of the Confederated Tribes of the Umatilla Indian Reservation in Northeast Oregon, where he grew up. He also has blood ties to the Cocopah Tribe and Yankton Sioux of Fort Peck. Sams most recently served as Oregon Governor Kate Brown's appointee to the Pacific Northwest Power and Conservation Council where he held a position as a council member from March to December of 2021. Prior to the NW Council, he served as executive director for the Confederated Tribes of the Umatilla Indian Reservation.

Special Category: Borders

Use the WRRC 2025 Annual Conference theme, **Shared Borders, Shared Waters: Working Together in Times of Scarcity**, to inspire your photographs.

One winner, one runner-up, and one honorable mention will be chosen from each category.

*"Borders" category images can be from any location.

WRRC 2024 Photo Contest Now Open!

The WRRC is excited to announce our 2024 Photo Contest. This year, we're returning to the broader theme–Water in Arizona. We invite you to showcase your talent by capturing anything from nature and wildlife to industry and agriculture, including people at play and at work. It's totally up to you. Just make sure your picture relates to water and it's in Arizona!*

Check out last year's winners.

Deadline is Dec. 20, 2024

https://wrrc.arizona.edu/opportunities/photo-contest/wrrc-2024-photo-contest

Located in the Sacred Valley of Peru, the Maras Salt Mines are an ancient site where salt has been harvested for over 2,000 years. The mines consist of over 5,000 small, terraced salt pans that run along the mountainside. The salt is collected from a natural underground stream that fills the pans with mineral-rich water. As the water evaporates in the sun, it leaves behind salt crystals.

The Maras Salt Mines predate the Inca Empire, making them one of the oldest known salt-producing sites in the world. The Incas controlled the mines and used salt as a major resource for trade and preservation. Remarkably, the traditional methods of harvesting salt in Maras have been preserved and are still used by local families today.

These salt mines are not only an important historical site, but also a living part of the local culture, with ancient practices continuing into the modern world. The Maras Salt Mines provide a unique glimpse into the past, showing how ancient civilizations used natural resources in ways that are still relevant today.

Tuve'hongnöm Creations is a Native/Indigenous woman owned and operated small business based in the Southwest. Specializing in Fine Indigenous Art for ALL.

Tuvehongnom Creations

Seeking Native artists for the October boxes, really would love to include any Alt Indigenous brands/business for the Halloween boxes I'm looking for items like pins, cups, tote bags, stickers, earrings etc! I haven't found an artist to highlight for October yet so please help me out by sharing this I included some pics of last year's Halloween boxes as an example If you're interested send us a message this is open to any and ALL Indigenous artists in the U.S. & CANADA it doesn't matter if your business just started either, were happy to work with you.

Lawmakers seek bills to end 'use it or lose it' water law, expand water rights retirement

program

By: Nevada Current

Nevada lawmakers may address legislation that would deem water conservation a beneficial use, effectively upending traditional "use it or lose it" water law. (Photo Credit: Colton Brunson, Water Commissioner, Nevada Division of Water Resources)

By Jeniffer Solis, Nevada Current

Nevada's limited water resources and wide open public lands will continue to be the source of legal and political battles for state lawmakers next year — whatever the outcome of November's election.

When state lawmakers meet in Carson City next February, they will be asked to consider several — likely contentious — bills related to groundwater, agriculture, and public land use during their four-month legislative session.

On Friday, the Joint Interim Standing Committee on Natural Resources voted to advance a number of bill draft requests that could deeply affect the state's water use, including a bill that would essentially overturn Nevada's "use it or lose it" water law.

Bill draft requests (BDRs) are not official bills, they are requests by lawmakers for a draft of the proposed bill they can further amend and discuss during the legislative session.

The most substantial BDR coming out of the committee would revise water law to encourage water conservation by allowing a water right holder to conserve their water under a water conservation plan without losing their water right. Under the proposal, water conserved under a conservation plan would be considered appropriated water, or water that is already being put to beneficial use.

The bill would substantially change Nevada water law, which states that water users can't hold on to water rights if they do not intend to use it productively in a timely manner.

During the Friday interim meeting, several members of the committee were reluctant to advance the bill draft request.

"We all know we have to address water and water conservation, but this particular bill is so encompassing," said Republican Sen. Pete Goicoechea, who represents rural Senate District 19. "I really want to see some language before I vote to bring a bill like that forward and some of the ramifications that could come out of a bill like that."

Washoe Republican Assemblyman Rich DeLong said he did not think next year's legislative session was the right place to debate such a massive change in Nevada water law.

"I just don't think the discussions have matured far enough to be able to put together a BDR," DeLong said. "I just think it's too soon to do this."

Democratic Assemblywoman Natha Anderson of Sparks, vice-chair of the Assembly on Natural Resources, said the bill was an important first step in putting language on the table and starting a conversation about reworking Nevada water law.

"It's important that we start here, so that we can have that conversation and work on it throughout the next session. I don't think our state is getting in any better position, water-wise, if we wait," added Reno Democratic Assemblywoman Selena La Rue Hatch during the Friday hearing. "We need to get started as soon as possible."

Three-fourths of Nevada is currently experiencing abnormally dry conditions, with parts of the northwest corner of the state hitting moderate drought this summer, according to the U.S. Drought Monitor.

In several parts of the state, significantly more groundwater is extracted than is returned to aquifers each year, leading to declining water levels. About 56 of the state's water basins are currently over-pumped, according to data compiled by the Legislative Counsel Bureau's Research Division.

The Joint Interim Standing Committee on Natural Resources also voted to advance two bill draft requests for bills that would create and expand state programs to buy water rights from overappropriated groundwater basins.

One of the bills would establish a dedicated account for the Voluntary Water Rights Retirement Program, which was allocated \$25 million in funding last year to address groundwater conflicts by purchasing groundwater rights from private landowners in over-pumped and over-appropriated basins. The bill draft request was recommended by the Las Vegas Valley Water District and Jeff Fontaine, the executive director of the Humboldt River Basin Water Authority.

The program has <u>proved more successful</u> than anticipated. While the program is only available to landowners in about half of Nevada's counties, water rights sellers offered to sell a total of \$65.5 million in water rights in a matter of months — about \$40 million more than available funding.

The other water purchasing bill—recommended by Goicoechea—would create the Nevada Water Buy-Back Initiative for the purpose of purchasing and retiring water rights in over appropriated groundwater basins over the long term.

Another water conservation bill draft request advanced by the committee Friday would extend the state's time limit on temporary conversion of agricultural water rights for wildlife purposes from three to ten years.

The Walker Basin Conservancy, a conservation group focused on Walker Lake, spoke in support of extending the time limit.

"The future of Walker Lake and the Walker River depends on Nevada statute extending the time period for temporary conversions. It will provide more flexible management tools for our region," said Peter Stanton, the executive director of the Walker Basin Conservancy.

Part of protecting and managing Nevada's groundwater is collecting better data on Nevada's intricate network of groundwater aquifers, said lawmakers. The committee voted to advance a bill draft request for a bill that would appropriate \$1 million to the Division of Water Resources to update baseline science to improve the understanding of groundwater availability across the state.

Water managers in Nevada currently rely on water budget estimates developed 50 to 70 years ago, raising major concerns about the accuracy of groundwater availability, according to the Nevada Division of Water Resources. That uncertainty has become an even larger issue, as

Nevada faces escalating economic growth and development pressures, including <u>lithium mining</u> and <u>solar development</u>.

How a Native elections official is breaking down voting barriers in Arizona Gabriella Cázares-Kelly knows the obstacles voters in remote and Indigenous communities face to participate in elections — and she's tackling them her way. https://19thnews.org/2024/09/how-a-native-elections-official-is-breaking-down-voting-barriers-in-arizona/?utm_source=pocket-newtab-en-us

Indigenous Peoples of the Americas: A Guide to Resources at the Library of Congress

This guide provides an overview of resources at the Library of Congress that relate to Native communities in the continental United States, Alaska, Hawaii, Canada, Mexico, South America, and the Caribbean.

This guide brings together resources at the Library of Congress that relate to Indigenous communities in the Americas. Follow the links at left to explore research guides, digital collection material, Story Maps, and event video recordings. The resources listed in this guide are selective rather than exhaustive, and we encourage you to explore the <u>overview guides listed on the Research Guides page</u> to gather more details about Library of Congress holdings related to Native peoples in specific formats and on certain topics.

The Library of Congress has long treasured and preserved Native American collections in a variety of formats. We acknowledge that some of these collections were acquired without the full consent of their communities of origin. Today, the Library is dedicated to building vibrant partnerships with Native American communities; providing respectful, consultative, and appropriate access to historic Native American materials; promoting innovative scholarship on Native American collections; collecting contemporary Native

American works; and cultivating and celebrating distinguished achievements by Native American scholars and creators.

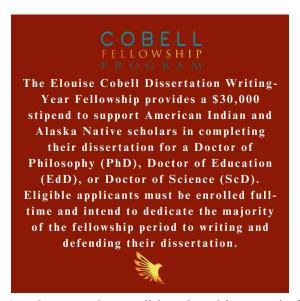

Located near the confluence of the Potomac and Anacostia rivers, the Library of Congress is built on land that is part of the homelands of the Nacotchtank (Anacostan), Piscataway Conoy, Pamunkey, and Manahoac people. Indigenous peoples, including members of these nations, still live and practice their teachings and cultures here today. The Library honors these stewards of the land, and all of the Indigenous peoples of the United States, who are the first peoples, including those in the region where the Library now provides its services. The Library works to interact with these groups in a responsible and respectful way.
