Manitou Cliff Dwellings

Manitou Springs, Colorado

These faux-cliff dwellings allow visitors to climb around on a replica archaeological site.

The Manitou Cliff Dwellings, located a few miles west of Colorado Springs, Colorado, is a fake Indian village built to resemble the much more famous ruins of Mesa Verde National Park.

This tourist destination, now over 100 years old, began with a Colorado Springs journalist-turned-historic-preservationist named Virginia McClurg. In 1889, after a couple of visits to the still largely unexplored Mesa Verde country, McClurg and fellow preservationist Lucy Peabody founded the Colorado Cliff Dwellers Association. Their goal was to protect Mesa Verde from vandals and pothunters by turning it into a national park.

Fast forward a decade. After two unsuccessful attempts to get a national park bill passed through Congress, McClurg gave up the fight. She opted instead to try gaining support for turning Mesa Verde into a state park. However, Peabody continued promoting the national park idea and soon the women cut ties with one another.

Mesa Verde did indeed become a national park in 1906, leaving McClurg on the wrong side of history. In response, she retreated to Colorado Springs, hired men to haul over a million tons of rock from demolished cliff houses near Mesa Verde, and had them rebuild the ruins beneath a red rock cliff just north of Manitou Springs. Hence, the Manitou Cliff Dwellings.

Visit today and you will witness something you would never see at Mesa Verde: kids climbing over walls and traipsing through the dwellings themselves. Unlike archaeological sites within the national parks, visitors are welcomed and encouraged to touch the ruins. They are held together with cement, anyway.

Oddly enough, and despite the 100-year-plus history of the Manitou Cliff Dwellings, many visitors leave wondering if what they just saw was real or not.

Anne Louise Willie

I was in Whiteriver on Friday taking a break from our food stand and checking out the jewelry sellers as the tribal fair begins. I ran into former Navajo Nation President Jonathan Nez. He is running for a U.S. congressional seat for northeastern Arizona. The November elections will be here before you know it; your vote counts...

.....

"You can have flaws, be anxious and even be angry, but don't forget that your life is the greatest business in the world. Only you can stop it from failure. You are appreciated, admired and loved by many. Remember that being happy is not having a sky without storms, a road without accidents, a job without effort, relationships without disappointments.

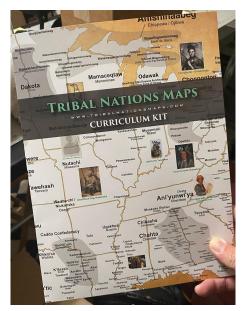

"Being happy is to stop feeling a victim and become the author of your own destiny. It's going through deserts, but being able to find an oasis deep in your soul. It's to thank God every morning for the miracle of life. It's kissing your children, cuddling your parents, having poetic moments with your friends, even when they hurt us.

"To be happy is to let live the creature that lives in each of us, free, joyful and simple. It's having maturity to be able to say: "I made mistakes". Having the courage to say "I'm sorry". It's having a sensitivity to say "I need you". Is having the ability to say "I love you". May your life become a garden of opportunities for happiness... that in spring I can be a lover of joy and in winter a lover of wisdom.

"And when you make a mistake, start over. Because only then will you fall in love with life. You will find that being happy doesn't mean having a perfect life. But she uses tears to irrigate tolerance. Use your defeats to train your patience.

"Use your mistakes with the serenity of the sculptor. Use pain to tune into pleasure. Use obstacles to open the windows of intelligence. Never give up ... Above all, never give up on the people that love you. Never give up on happiness, because life is an amazing show.".

Tanka Fund introduces new video series called "Bringing the Buffalo Home"

The first episode of "Bringing the Buffalo Home" is focused on the next generation of young Native Buffalo ranchers and Tanka Fund's work to recruit and support them. Through training and partnerships, the fund helps young rancher partners like Brendan Siers of Double S ranch expand Buffalo operations, emphasizing the economic, cultural, and ecological benefits of revitalizing Buffalo ranching among Native communities.

The series is a followup to our recent video celebrating Tanka Fund's first 10 years, "The Buffalo Return: A Decade of Healing and Renewal."

Brian Sandoval @Pres_Sandoval

Reno was just ranked the 9th most educated city in the U.S. by Forbes. This ranking exemplifies our community's commitment to education and the priority we put on higher education. We truly live in a special place! #GoPack

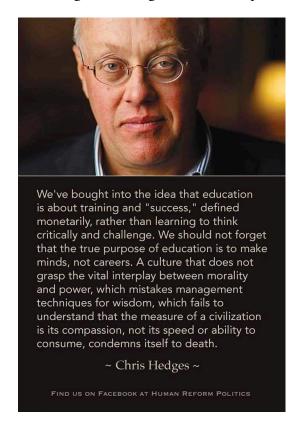

From forbes.com (check out your area!)

9. Reno, Nevada

- Bachelor's completion rate for ages 25+: 61.39%
- Ages 25+ with graduate degrees: 26.24%
- Racial gap in bachelor's degree attainment: -17.36%

Surrounded by ski resorts and Lake Tahoe scenes, Reno is Nevada's second-largest city after Las Vegas. Reno, celebrated as the "biggest little city" in the world, also stands out for its educated residents.

In spite of its elevated high school dropout rate of 10.75%, 61.39% of Reno adults hold bachelor's degrees and 26.24% have graduate degrees. That's impressive enough to land Reno

Girls in Aviation Day opens registration for 2024

The Sierra Battle Born chapter of the nonprofit group Women in Aviation has officially opened registration for the 3rd annual Girls in Aviation Day.

Acting Secretary Julie Su continued her Good Jobs Summer tour to promote the Department of Labor's Good Jobs Principles and meet with workers who are benefitting from the Biden-Harris administration's investments in the United States' roads and bridges, manufacturing base and clean energy economy. In Phoenix she visited the Fresh Start Women's Foundation, WB's grantee through the Women in Apprenticeship and Nontraditional Occupations (WANTO) grant program, and met a group of women who received training, financial counseling, legal services and other resources and are now working in high-paying fields.

- Read about the good clean energy jobs being created by federal investments
- · Access a toolkit on helping workers with disabilities get ahead through good jobs
- The Biden administration announced yesterday that <u>it finalized a plan to expand solar energy</u> on federal land. The U.S. Bureau of Land Management's plan identified 31 million acres across Arizona, California, Colorado, Nevada, New Mexico, Utah, Idaho, Montana, Oregon, Washington, and Wyoming.
- The areas have high solar potential and won't interfere with wildlife or plant habitats, making it easier to get permits. "We've been really pushing ourselves to use our executive authority wherever possible to improve the federal permitting process," White House Deputy Chief of Staff Natalie Quillian said in an interview.

Navajo Nation's Bold Move on Uranium Transport Stirs Attention

Navajo Nation has strengthened its uranium transportation laws, sparking debate over environmental protection and tribal sovereignty.

At a Glance

- Navajo Nation approved emergency legislation to strengthen tribal law regulating radioactive material transport
- The action responds to the revival of uranium mining near the Grand Canyon
- New law mandates advance notification, transport fees, and emergency preparedness plans
- Navajo President Buu Nygren signed the legislation, emphasizing protection of tribal lands and resources

Strengthening Tribal Laws for Environmental Protection

The <u>Navajo Nation</u> has taken decisive action to bolster its tribal laws governing the transportation of uranium across its lands. This move comes in response to growing environmental and health concerns, particularly following the revival of uranium mining operations near the Grand Canyon. The emergency legislation, approved by tribal lawmakers and signed by Navajo President Buu Nygren, aims to provide robust regulation and oversight of uranium transit through Navajo territory.

<u>President Nygren</u> emphasized the importance of this legislation in a letter to lawmakers, stating, "The purpose of this legislation is to provide for the protection, health and safety of the Navajo Nation and its people and our precious resources such as our water." This statement underscores the tribe's commitment to safeguarding its community and natural resources from potential harm associated with uranium transportation

Key Provisions of the New Legislation

The updated law introduces several crucial requirements for companies transporting uranium ore

through Navajo lands. These include mandatory advance notification of uranium ore shipments, payment of transport fees, and the filing of comprehensive emergency preparedness plans. These measures aim to enhance safety standards and ensure that tribal authorities are fully informed and prepared for any potential incidents.

"At the end of the day, we want Navajo leadership and Navajo citizens to be comfortable with modern uranium ore transport and to understand that it poses no risk to human health or the environment," said <u>Curtis Moore</u>, a company spokesman. "And, we are willing to go above-and-beyond applicable federal and state laws to make that happen."

Historical Context and Future Implications

The Navajo Nation's history with uranium mining is complex and fraught with environmental and health concerns. In 2005, the tribe banned uranium mining on its lands due to widespread contamination and health issues resulting from past mining activities. However, the transportation of uranium was not prohibited in 2012, leading to the current situation where ore can be transported through Navajo territory.

Navajo Attorney General Ethel Branch highlighted the significance of this new legislation, stating, "That's part of why the (Navajo) Nation needed to respond so strongly here, to push back and ensure that our community doesn't continue to get disproportionately burdened with radiation and uranium-based waste and contamination." This statement reflects the tribe's determination to prevent further environmental degradation and protect public health.

Balancing Economic Interests and Environmental Concerns

The strengthening of uranium transportation laws by the Navajo Nation highlights the ongoing challenge of balancing economic interests with environmental and public health concerns. While uranium mining and transportation can provide economic opportunities, the Navajo Nation's history of environmental contamination from past mining activities has made the tribe cautious and proactive in its approach to regulating these activities.

Energy Fuels Inc., the company involved in the uranium mining near the Grand Canyon, has expressed willingness to work with the Navajo Nation to address concerns and exceed federal and state safety standards. This cooperative approach may serve as a model for future interactions between Native American tribes and resource extraction companies, emphasizing the importance of dialogue, transparency, and mutual respect in addressing complex environmental and economic issues.

As the Navajo Nation continues to grapple with the legacy of past uranium mining and the current challenges of regulating its transportation, this new legislation represents a significant step towards asserting tribal sovereignty and protecting the health and well-being of its people and lands. The success of these measures will likely be closely watched by other Native American tribes and environmental advocates across the country.
